

Pure Storage – Veeam – ExaGrid

Next Generation Primary Storage and Backup

DATA SHEET

Gartner

ExaGrid Named "Visionary" in the 2015 Magic Quadrant for Disk Backup with Deduplication Appliances

Veeam Named a Leader in the 2016 Magic Quadrant for Data Center Backup & Recovery Software

Pure Storage Named a Magic Quadrant for Solid-State Arrays Leader Three Years in a Row

ExaGrid Disk-Based Backup Appliance Named Gold "Product of the Year, Backup Hardware"

Veeam Availability Suite Named Gold "Product of the Year, Backup & DR Software and Services"

Organizations are increasingly being pressed to get more out of their IT dollars. In addition, business critical application workloads continue to have a need for faster CPUs, more storage IO resources, and very high levels of application availability. To attain these objectives, businesses need to adopt the next generation of high performance storage and data protection solutions for their virtualized environments, while staying within the confines of the IT budget. Pure Storage, Veeam, and ExaGrid have developed a joint solution, which provides data centers with more application performance and functionality at a lower cost.

Pure Storage is leading the transformation to the all-flash data center by dramatically reducing storage complexity while improving application performance, resiliency, and efficiency. Pure Storage lowers storage costs by up to 50% and management costs by up to 90% by shrinking your storage footprint by 5-10x.

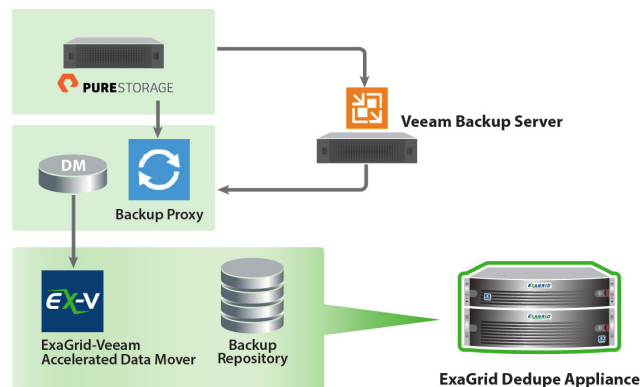

VEEAM

Veeam enables the Always-On Enterprise™ by helping organizations meet recovery time and point objectives (RTPO™) of less than 15 minutes for all applications and data through a fundamentally new kind of solution that delivers high-speed recovery, data loss avoidance, verified recoverability, leveraged data, and complete visibility.

ExaGrid understands that deduplication is required for long-term backup retention, but how it is implemented changes everything in backup. ExaGrid has a unique "landing zone" where backups land straight to disk without any inline processing, delivering the fastest possible backups. The most recent backups are kept in undeduplicated form, and since no time-consuming data rehydration is required, VM boot times are seconds to minutes. ExaGrid provides full appliances in a scale-out GRID, so the backup window stays fixed in length regardless of data growth, which eliminates expensive forklift upgrades.

The combination of Pure Storage all-flash storage, Veeam Backup & Replication software, and ExaGrid backup storage provides the fastest, most reliable and cost-effective primary storage along with the fastest and lowest cost backups with the shortest recovery times. This powerful combination increases the performance of storing, backing up, and recovering data – at a lower cost than traditional legacy storage and backup solutions.
